

- Start with creating a barrier around the eyebrow skin area, above & below the brows using Vaseline
- Please avoid getting the barrier products onto the eyebrow hairs as this will cause a barrier on the hair, preventing the lotions from processing
- We recommend using a mascara wand & Lash & Brow lift balm/ lash lift adhesive to ensure brow hairs stay in the position where you have placed them
- Apply the Lash Lift Adhesive/Balm in tiny sections starting from the inner brow area. Apply small amounts of adhesive/balm onto the base of the brows. Using a mascara wand pull the brow hairs upwards & press down any strong or stubborn hairs
- Please take a look at the brows & make sure you are happy with the shape & that they are as symmetrical as possible before applying the Lash & Brow Lift Lotions
- Using a glue tray or a glue ring, pump a tiny amount of Step 1: lifting Lotion, using a microfibre brush, gently apply to the root of each eyebrow
- Then, work the lotion up from the root upwards to 0.5-1mm of the length of the brow hairs
- Leave this Step 1: Lift lotion Lotion on for the desired processing time
- Once this has been processed, use a damp cotton wool pad to gently remove Step 1: lifting Lotion
- Apply Step 2: fixing Lotion & repeat the process as before
- Once this has been processed using a damp cotton wool pad, gently remove Step 2: fixing lotion
- Using a damp cotton pad ensure all traces of lotions & adhesive/balm have been removed & the brows are completely clean before applying your brow tint
- Tinting can be applied to give more definition to the laminated brows
- Once you have tinted & are happy with the results, apply Eyebrow Balm to nourish the brows. (This product is left on for 24 hrs)

- Avoid getting the brows wet
- We would recommend giving the client aftercare advice

Recommended processing times

Ultra-fine brow hairs - 3 minutes

Fine to Medium brow hairs - 5 minutes

Thick brow hairs- 6 minutes
